

## **The Aware Show with Lisa Garr**

Kim Dandurand of Aulterra

KPFK 90.7 FM

June 14, 2006

Tape 1 of 3

Welcome to Aware. We are dedicated to communicating information that inspires your positive growth and change. Are you interested in a peaceful planet? Are you interested in optimal health? Are you living with purpose? Are you enjoying your life? We realize each person can make a difference, and our mission is to empower your awareness. The choices that you make in every moment shape your life, and we encourage you to realize that you have your own answers, and to always listen to your own truth. We invite you to stay aware.

LG: Good afternoon. Welcome to Aware. Hi, this is Lisa Garr, ready to rock and roll with you today for three hours. Tres horas! Hoy dia. [chuckle] Because, uh, we are here, in this beautiful fund drive here at KPFK, which is our opportunity, just three times a year, to come to you and blab a lot and ask you to donate to the station. But, what we try to do on The Aware Show is stay really super-committed to very, um, groundbreaking, cutting-edge, information – some best-selling authors – really bring you the cream of the crop during this, uh, fund drive so that you get something in return and, um, a lot of great information, some of the best products out there that we can find. Because they come to us, and we have all sorts of ways of quantifying these products, and I usually love the products that have the people attached to them with the most incredible stories. And, um, usually the people who come to us are the scientists or the creators or founders of the specific thing, herb or product that they have found, and they have amazing stories that you can see. So you're gonna see some of that during this fund drive here during The Aware Show, we've got a lot of great things coming up for you later on in the, um, three hours today – so stick with us.

LG: Um, alright, just to start off – have you ever held your cell phone up to your head and, um, it had gotten too hot to hold because maybe the battery's heating up or something? And do you ever wonder what this is doing to your head? Or your ear? Um, do you carry your cell phone on your belt? Have you ever wondered if it's okay to have such a high frequency radiating so close to your reproductive organs? I'm sure it's crossed your mind – it's crossed my mine. We have Mr. Kim Dandurand from the Aulterra Neutralizer Phone Patch on The Aware Show today. He's been on the show before talking about the cell phone patch, and if you don't remember Kim, he's one of the people I'm talking about with those amazing stories. He was a builder, he was on a job site. One particular week he was working like a water project. Someone told him about a mineral deposit in Utah, and of course this sent chills down his spine. He knew that this lit up for him. He got to the site, kind of a voice came inside of him, or with his intuition, but it was very, very guided. He said it was a [???]. Um, they led him to this valley overlooking this bright green mineral deposit, and he took samples of this rock powder. Didn't do anything about it for years – until one day he sent it to a lab, and it proved to have the ability to neutralize electromagnetic energy by emitting its own subtle energy field. Kim Dandurand is back with us today to talk about some breaking news that has been discovered about this kind of blend of rock

powders, um, that he found – it's in this Aulterra Neutralizer Phone Patch. Welcome back to the show, Kim. Good to have you with me today.

KD: Thank You.

LG: Great to have you kick off the fund drive with us, too, because you have some news! Now I kind of blew through your story there because you've been on the air with me – what, uh, three or four times?

KD: Three, three times now.

LG: Three times now.

KD: Yup.

LG: And, um, so if the listeners have not heard, we'll go through your story in a little bit, more, but, um, I read some of the new studies that are – you've been up – what have you been up to? [laugh]

KD: Well this is [???], this has been a phenomenal experience. It's, it's like when, you know, you work at something for so long and you get a little bit of science here and there and finally you get the stuff you've been looking for all along...

LG: Mmm-hmm...

KD: ...and it turns out you were right? And, uh, so what's happened is, we've got research that actually shows we are, uh, as far as we know, the first company ever in the world to successfully alter the waveform coming from the cell phone. Not just a product that protects the body, but it actually changes the waveform. It lowered the peak of the waveform by 50%, and it eliminated the 2-10 hertz range, which is the range that the voice travels over, which is the part that makes the cells harden and try to get away, which causes the DNA breakage that occurs to no longer be able to heal.

LG: Now it helps to see these graphs that you're talking – that you're, uh, relying to [sic]. I think there's a – uh, something having to do with the image here that I'm looking at. I'm going to try and share this with my listeners.

KD: Cool.

LG: But I'm looking at two graphs, and one is the cell phone radiation without the neutralizer, and one is cell phone radiation with the neutralizer. Now you can imagine the one without it is spiking very high and it looks kind of like a mountain. It's very low, and then it peaks, and then it's low again. And then, with the Neutralizer, it's low and then it peaks half-way, like half the height of the mountain, and then it's low again. Explain what those two graphs mean.

KD: [laughter] There was, uh, even... uh, I have to say up front that this research was immediately sent to a gentleman by the name of George Carlo, who wrote the book on cell phone safety. And, uh, when he took a look at that he just said, "Unbelievable. Impossible." Um, it was the only two words he put in his email back. Since then a lot has changed. But what it means is, the actual wave coming from the

phone has been lowered by 50% without altering its ability to work. If you look on the, uh, the one website where it says “no neutralizer” – about a [sic] inch over there’s these little spikes on either side...

LG: Mm-hmm...

KD: And if you look on the other one, those spikes have disappeared...

LG: Yeah!

KD: Those are the spikes that actually cause the cells, the body, to damage the biological system.

LG: Let’s talk about... and I want to talk about that, too. What is it about a cell phone that does damage the DNA?

KD: Well, obviously there’s a lot of controversy on that, and you would get cell phone industry people to say that there’s not enough research to really back that up. But what happens is – and a lot of things I originally came out – that we were saying, in the last two years, science has proven to be slightly different. So what, uh, so meeting with George Carlo and getting the real science behind the newest stuff they’ve come out with... it, it... what it does, is the waveform itself causes the cells to, the cell tissue itself, to harden – to try to protect itself from that wave going into your head.

LG: Hmm.

KD: Or going into your kidney, or going into your organs, or anywhere where your cell phone antenna happens to be. Um, so there’s cells everywhere. So they, they try to get away from that. Um, the best example I can use – and I love this one – is um, uh – when you go get um – uh, uh – a sound thing to look at your baby – when you’re pregnant?

LG: Mm-hmm?

KD: And the baby’s always trying to move to get away from it?

LG: The ultrasound.

KD: That’s what’s happening to your cell. It’s trying to move to get away from it, or protect itself. So it actually hardens. The, the very layer on the top of the cell actually, um, hardens to protect itself. When it does that, normally within any – all the time – your DNA strands are breaking and they, the cells split and then that’s how you end up y’know, reproducing cells and stuff. With this – the DNA inside the cell – once it breaks can’t heal, and that’s why you end up with a cell that can then become a cancerous cell or a tumor of some sort.

LG: So, what it does is that – the cell tissue hardens to protect itself from the – from what? The...

KD: From the radiation coming from the cell.

LG: It’s radiation?

KD: It – yes, cell phone, EMF, it's emissions, it's a form of radiation. Yes.

LG: Okay, so – radiation just like an x-ray?

KD: Um, I'm not educated enough to say that's exactly what it is. I know they call it cell phone radiation.

LG: Right, I saw – I read that.

KD: And that's the common term for it in the industry.

LG: Well it does radiate electromagnetic frequencies.

KD: It's a microwave-type radiation...

LG: It's a microwave...

KD: So, in that, there is... y'know, I can't say it's like nuclear [sic] radiation...

LG: Right...

KD: ... but they call it cell phone radiation.

LG: Well it is a microwave.

KD: Ah, it, well, it falls in that category, yes.

LG: Okay, so that makes sense. So the, um – so what this is basically doing is – now how does the powder – this, this rock powder that's inside this patch – actually emit its own type of energy field? How did you discover that?

KD: Well, everything on the planet emits energy of some form.

LG: Right.

KD: And what they found was, this particular rock powder that I found, I – I created a homeopathic and added to it. It caused it to emit a much stronger waveform. So that waveform reaches out about three foot on either side of that rock, or of the neutralizer patch, so it covers like a six area – six foot area, um, [clears throat] um, diameter. Three foot on either side, yeah that's right. Um – it simply emits a field. When we added a homeopathic to it – which is a proprietary part of what we do – it actually made it stronger. So, what's happening is – one cell phone – one waveform, coming from something from the earth, which is orga... or natural, uh, is causing a man-made waveform – more or less come back into balance or harmony.

LG: Hmm.

KD: One subtle energy field affecting another.

LG: So it neutralizes it, which is why it's called the neutralizer?

KD: I've always known it did, but when we got this, which has only been about three weeks ago, it's the first time we have absolute proof that it actually changed the waveform and eliminates the part of the waveform, uh, that was causing damage to the body.

LG: Now this has gone on to – I think the last time we talked, you were getting into whole foods and various different, um, markets. So, how did that go?

KD: Well it's going great. Um, with Whole Foods, y'know, we're in all the Southern California stores. And we've just, in the last week, got our new designed packaging, we just, uh – because we're in a lot of, uh, uh, Taiwan and China and other areas – uh, other nations around the world, I should say – we had to go to a company and get a holographic – a secure holographic image done. So we've just got that, so our new packaging is finally going out, so now we'll be progressing out to all 170 Whole Foods stores fairly rapidly.

LG: But, it's not in the Whole Foods stores yet, it's here, at KPFK... [laughs]

KD: Yes, it is. [laughs] You can go online and get it from you guys, which is wonderful.

LG: Yes! We, um, we – during this fund drive right now, we have the cell phone patch available here, um, for a \$125 pledge, you get three of these patches, and you can fix them to cell phones, computers, microwaves – anything that emits a harmful EMF. My, my daughter's bed – in her bedroom, is right next to a – an electric socket, so of course I put them on the socket, and they're everywhere [laughter] in our house. Just – you know what – I would rather be careful than not careful – I really would rather know that if there's anything that, that all the scientists – science is proving here, that you're having done with these graphs and so forth. If it's proving that there is a way to lessen the magnetic frequencies, 'cause we get it from everywhere – if you're driving your car, it's coming from your radio right now. I mean, it's everywhere in our lives, so why wouldn't you kind of do something about it – in order to lessen the effects of these electromagnetic frequencies that we're getting bombarded with on a daily basis. So, pick up your cell phone [laughter]... I'm just kidding. If you're at home, pick up your phone, give us a call, 818-985-5735, and you can get the, um, neutralizer cell phone patches here, um, by calling KPFK. And the bigger picture is that you're donating to the station that gives you this type of information on a daily basis throughout 365 days of the year. We come to you three times a day – or three times a year – um, to ask you to support the station, because it is completely listener, um, uh, focused. It is all about you guys, so we're gonna go back to talking a little about this. What did you find in the first round of testing? As I had said in the intro, it took you a while to send this particular sample to a lab. Is that right?

KD: Well, yeah. When we first – uh, I mean, if I got back to the very beginning – I was guided to this, this, this proc... I call this a spiritual awakening process that happened, um, over by... the rock actually appeared to me in the side of a hill. Um, and from that point...

LG: Hmm.

KD: It took me about a year before I ended up figuring out what to do with it. One day somebody asked me, “would it work with cell phones?” Would it help with the danger... you know, they got a hot head and other headaches and stuff. So I thought about it for a minute, figured out how to change the blend just a little bit, and make the homeopathic different, and we tried it, and it worked.

LG: Now, let me... I’m sorry to interrupt you, Kim. But, when you said that the rock appeared to you on the side of the, uh, mountain... what do you mean by that?

KD: Um, Lisa, what exactly happened there was I had been driving around in this mountainous area... hold on just a minute... um, and, um... went up to the, drove up to the edge of this cliff, and I got out of my car and walked up to it. And... actually it felt like an energy field or a soft barrier between me and, you know, the next couple of feet. So, I knew something was coming up, and I just sat down immediately to meditate and... what happened there is, normally I sit down, it would take, you know, 15, 20 minutes to get – let go, and then get centered, and focused, and to actually get into a decent meditation. By the time I had even gotten half-way sitting down to the ground, I felt like I was already being pulled out of my body. So, by time I was sitting down it was – I was completely finding myself expanding into the area around me. Uh, totally disconnected from my physical body at that moment. And, um, uh... continued to expand and I saw this huge vortex that had been... looked like it had been sitting there for millions of years that was dormant, and all of a sudden it started to slowly turn. And as it started moving, I started hearing a tone or a sound, and eventually realized it was a word. And when I could hear the word well enough, I spoke it, and it was at that point my body – my being, my essence – spread out through everything that was there and the hillside and into the planet and out into a – I don’t think I can describe it – is a... a wave of, of, of unconditional love. And I had another gentleman with me, and all of a sudden I heard someone yelling... [???]... I was really bummed, because I was on, uh... one of those places where you work all your life to get to, and you finally were there, and the last thing I wanted was to come back at that moment. But I did, and – you know – this other gentleman that was with me was running towards me – you know – waving his arms, and I said, you know, “Tom, what happened?” He goes, “You know, you disappeared, there was... a bunch of steam came up from the ground and you disappeared in it.” And it kind of scared him. Uh... at that point I was in absolute state of bliss, it was, um... a very unique experience in my life. So I looked around, and there was all this green rock in the side the hill that had not been there before, and... and we’ve had at least 50 people verify that, grew up in that area, that that green rock was never there. That’s what I’ve taken, and that’s been the key element to... to getting things to happen that have happened for us.

LG: Wow, so this is a, um... this is something that started... now, no longer are... you’re a builder, right? You... you’ve moved on?

KD: I was a builder prior, you know, for many years I was a builder in Northern California – Lake Tahoe, that area – uh, designed and built homes for twelve years. Uh, moved up to Idaho – went up there on vacation – and, uh, started a company called Idaho Wood Works<sup>1</sup>, which was cutting boards. Uh, became one of the largest producers of cutting boards, uh, in the U.S. – we were worldwide. And, uh, I have four patents on cutting boards. And uh, when that grew too fast I eventually sold it and then got into what I truly love, which is always been into... uh, the health and healing, and that type of work.

LG: Mmm – so you're someone who's definitely guided by your, um, your passions in life. And by your mission in life, right?

KD: This has become... you know... I think I'm one of the most blessed people that... on the planet, in terms that I really truly know what my mission is and why I'm here.

LG: What is that?

KD: And doing that, and that is bringing forward this gift – uh, that was given to me. Um, being the steward of it, and being able to bring it to the population because not only does it... you know, it's not just about neutralizing electromagnetic fields from cell phones, it always creates... it also creates incredible healings in people. But we've also found that it also connects everybody – everybody that has one seems to be connected in a different way, and I seem to somehow feel that is the purpose of why I'm doing what I'm doing.

LG: What do you mean?

KD: Um... a lot of people, your listeners will have heard about radionics machines and things like that. Um, they've found that this green rock is... extremely powerful radionics machine, so when... say there's a thousand people have a neutralizer on the phone, they are connected in a way they couldn't be connected before.

LG: I was just studying radionics, so what... can you explain to the listeners a little about it?

KD: [Laughter] Uh, radionics I've been involved with since about 1989.

LG: Oh you have?

KD: Oh yeah.

LG: Huh.

KD: And have known all of different machines and stuff and whatnot. And primarily, what you're doing there is you're using a... uh, uh, a device, a man made device that, uh, connects to another person's energy field somewhere else on the planet or, if they're using it like... uh, you can put a picture of a field on it, and... there's dials, and you can adjust it for the frequency on that field that will help the plants grow. Uh, with Aulterra, you can put someone's name on this particular green rock that's been activated, and... completely affect them... uh, from E... protect them from EMFs anywhere on the planet. So what they found is it's tied into they lay lines around the planet, and that's why the response is instant no matter where somebody else is. So, because that's the primary ingredient in the neutralizer, it just seems to be... uh, the fact that it protects from EMFs and does that is what allows us to market it, though I believe the real reason behind it is to connect everybody on the planet.

LG: Wow! So the idea of having... it's kind of like an intentional, uh, meditation on somebody's wellbeing?

KD: Uh, that's what a lot of people do when they use radionics. Uh, if there's one thing that I do – or a gift that I brought forth – if there is such a thing, it's my ability to get out of the way and allow universal intent to come forward and not some intent of mine.

LG: Mmm, now that's very important. Yeah, 'cause sometimes... you don't want to mess with somebody else's energy field.

KD: No, so that... that's...

LG: There's an agenda there.

KD: ...the uniqueness that I bring to the table.

LG: Mm-hmm, I definitely agree with that. And... it's one thing to be able to kind of remote view something, but if you can, if you... I definitely believe in remote healing as well, and sometimes when somebody's not capable of seeing that healing in themselves – you can send healing energy to someone and it really, really does work.

KD: Yes, my wife is a master Reiki. Reiki master, and does distance healing a lot, but...

LG: A lot of people that I trained with as well, um, taught about those healing techniques that have... you have the ability to be able to... it's like sending an intention of love to someone, it's just a very strong healing energy to someone, but it has to be with totally pure intention. And, um, and I think you have to really know about that in order to do something like that.

KD: Right, and I think... it's very few people that get that right.

LG: Well, we are in the...

KD: And those that do...

LG: Yes, yes. See, absolutely. I think a lot of people know what we're talking about...

KD: Yep, [???

LG: And... [laughter] And we have, um, this is Kim Danderand who's on the line with me, he has created and discovered through a very wonderful guidance in his life, this particular rock, that he found in a mountainside in Utah and blended into a powder, put a few homeopathics with it, and put it into a patch that goes on the battery of your cell phone – or on, behind the battery of your cell phone, so it goes on the phone itself. And what it does is it e... it elimina... no, it doesn't completely eliminate... it neutralizes the effects, the harmful effects, of the electromagnetic frequencies that are coming from your cell phone, from your computer, from your microwave – you can even put it on your car radio, is that right?

KD: Yes, absolutely.

LG: And so, um, I have these patches all over my house, I've given them to tons of friends, and Kim has donated an unlimited amount of these packs to our station, to raise money for this incredibly listener-sponsored radio. It is a 125 dollar pledge to KPFK: you're supporting this station, you're keeping us alive and well on the air, and you're supporting your health – your family's health. If you are pregnant and have a cell phone, this is a really good thing to do. Um, to protect yourself from these types of frequencies if you have – um, your cell phone is heating up – and even if you use an earpiece, um, that earpiece basically works as a conduit channeling all of that energy into that particular cord that goes right into your head even stronger than if you were just to have the cell phone up to your head. So, um, this is a, there's a pack of three of these here, and here's the phone number to call: 818-985-5735. I'm just going to take a few minutes, and have you guys light up these phone lines, pick up these patches, these cell phone patches, because, um, there's a lot more information that I want to talk to Kim about. And, if you have the opportunity right now, take a break from this interview, give us a call: 818-985-5735. 818-985-KPFK is the phone number to call. And, what you're doing here, is you're, you're getting support for yourself. There's waves that come from cell phones that cause the tissues to harden, to protect themselves from these kind of microwaves that are coming from your cell phones. If you have an opportunity to be able to block these waves and their harmful effects on your body, and to neutralize them, Kim Dandurand has found a rock that he has put into this patch – a very nicely marketed package type of thing – it's just the size of a quarter. Put it inside your cell phone, and it protects you from the magnetic, I mean from the electromagnetic frequencies that come from the cell phone. Um, 818-985-5735 is the phone number to call. That's 818-985-KPFK. Um, these frequencies, these electromagnetic fields from the cell phones, were shown to, um, statistically have detrimental effects on the recovery of DNA, um, after they receive, you know, the heat from the cell phone. The DNA is affected from that electromagnetic frequency. There was – and proven in his statistics here – a hundred percent recovery of the DNA as if no cell phone was present when using the neutralizer patch. There's a lot of different statistics around this stuff. So, um, here's the phone number to call: 818-985-5735. There's a lot of different cell phone patches out there. I don't know about those, but I know there's a lot of studies that are being done on this particular one – it is the only product on the market that actually does protect the human DNA from the harmful effects of the electromagnetic frequencies, because it sends another frequency from this rock, from the rock powder, that is very effective in neutralizing the harmful frequencies coming from your cell phone. So, it has its own energy field – this rock, this powder that's inside this patch, has its own energy field. It is a very well-documented, scientifically proven product, um, and it's gonna be carried in Whole Foods very soon, but we have it here for you now at KPFK, and you're also donating to the station that has given you a lot, and it continues to give you a lot throughout the year. We here at The Aware Show are committed to bringing you some of the most incredible information – groundbreaking, cutting-edge information in the world of health, mind-body sciences on The Aware Show that we can find, so we stay committed to that throughout the year. We ask you three times a year to support this station that allows us to give you that information. So the phone number here again, it's 818-985-5735. 818-985-KPFK. We are, um, are with you today for three hours, and we have a 20,000 dollar goal by the end of these three hours to raise for the station, and Kim is participating in that, because he's donated these products so that they can aid in raising money for the station. Something that you can do to help yourself, to help your family, and, um, to limit the amount of frequencies that come at you during the day. 818-985-5735. I want to see two more people

give us a call, I want to go back to this interview with Kim, and see if there's something that we can [recording cuts momentarily] the station and help yourself. So, 818-985-5735. Two more people give us a call here, and the patches, if you ask the volunteers in the phone room for the cell phone patch, there are three patches that come in each pack. Um, you can affix it to all sorts of items in your house: computers, microwaves, anything that emits an electromagnetic frequency – this, the rock powder inside, the blended rock powders and homeopathics inside this particular patch, do a wonderful job at emitting its own subtle energy field which neutralizes the effects of electromagnetic energy on, um, your DNA and your body. So the number again here is 818-985-5735, that's 818-985-KPFK. Now Kim, I want to ask about the... this new testing that you've been going through...

KD: Yep...

LG: What inspired this, what made you go after getting... 'cause the original results were pretty significant.

KD: Well, the original ju... re... excuse me... [laughter]

LG: Go right ahead.

KD: The original results were what got us to go forward, and that was with human DNA. And those first tests absolutely set us apart from anybody else in the industry because we're the only ones that did research directly with human DNA. What this does, is it actually verifies why those results happened. It was one thing to show that it had protected the DNA, but there was no mechanism by which we understood or could prove or could show people why it happens, so occurred is... people kept saying, "Is there anything we can visually see that will show this?" So I first went to Bioresidence [sp?] Technologies and EAV machines and everyone that we have ever tried in the world, shows that our product completely protects anybody or the body from cell phone radiation. But then my, uh, Glen Rein, who does a lot of our research back in New York, uh, we came up with this idea – is there a way we can see if it actually affects the radio wave itself? So he went and got a guy who was a professor from a university for 28 years, a, a, a electrical engineer. And he said "Absolutely," we'll just hook it up to this machine they have, and it showed the wave form coming from the cell phone – he put the neutralizer on it, and the wave completely changed and he was absolutely dumbfounded because they didn't think that would happen. And the fact that... so now we have a visual thing that we can – now, it will be posted on our site shortly – that actually shows the change that happens when you put the neutralizer on it. The nice part about this is then... you know, this is going into all our brochures and our packaging and everything.

LG: Oh, great.

KD: It puts us, for the first time we become what's called a class-one product, it's the only product in the world to reach that status, from the Safe Wireless Initiative, and from the Science and Public Policy in Washington D.C. Um..

LG: Hmm.

KD: It's the only product that actually affects the waveform coming from the cell phone without interfering with it – that's what baffled them so much is it... cause it removes that... I think it's 2 to 10 hertz range, which is the range your voice travels over, they said, "Well, if you do that, there'll be no more voice," but that's not true. It, uh...

LG: That's what those studies were showing, ohh...

KD: A hundred percent still does it, so, what they've done is they've given us a... the Nobel Institute, in Sweden? To use for two days, to bring... for bringing about the third worldwide convention on cell phone safety in Sweden in December. Uh, to... want to bring all these scientists, we so far have 35 of the top scientists in the, in the industry coming to it, and there'll be quite a few more. Um, and actually we'll be introducing this research at that time and then getting it published.

LG: Wow, so you guys are really making significant headway in this.

KD: Significant. I mean, more so than... faster now than we've ever dreamed possible.

LG: The point that you make about the effects on the DNA have a lot of controversy around them because the cell phone companies do spend a lot of money on studies that show that it does not affect the DNA. And you have to always be careful about where those studies are coming from. Who's funding them, and who's conducting them? Because that's something you need to look out for, for, in... in always, when you do, when you look at their [???] studies. But, um... the basic bottom-line science around the Aulterra Phone Patch is that it does block those electromagnetic frequencies regardless of the fact that there's all this research that it does, or does not damage the DNA. Why wouldn't you just choose the safety? I know, that when it heats up, and it's next to my head, it doesn't make me feel very comfortable. Or if I put it on my, uh... like a belt clip, next to my ovaries, um... just something in my intuition tells me this is not a great idea. [laughter] Um, but it's just because, you know, that's – if I were to muscle test it, and if I were to use kinesiobiology on it – I mean I... it's so many people have tested, uh, have done kinesiobiology with my cell phone and without my cell phone; it obviously lowers the energy field – it obviously inhibits your own energy field no matter what – I think we all kind of know that intuitively. Um, and with all these products that are coming out these days, it's... um, it's... we are just bombarded with electromagnetic frequencies in our life. So, that's why you feel so good when you go up to the mountains, you know, when you get away from... there's like, your phones are out of range, and you can't get radio signals, and you go into that clean air? There's such a distinct difference that you feel alive and more a way you can think. Um, that's the difference of what your own body can tell you of how your... your own energy frequency is affected by all the electromagnetic frequencies that bombard us on a daily basis. So my thinking is, why wouldn't you be safe? And especially when it comes to your kids? Not that they have their phones, but when they're around your phones? Why wouldn't you be safe? So, this is something that I think is definitely something you should have in your arsenal of healing tools. This is something you should have in your healing pack right up there with your homeopathics and your olive leaf extract, and so forth... you've got to have your cell phone patches. [laughter] In my opinion. But at the same time, Kim has put a lot into the research and I know that this isn't something that is easy to do, because you have to make sure, if you're especially going to subject

this research to 35 doctors in Sweden, you have to have these studies, um... randomized and double-blind and with no agendas attached behind them and so forth. You – I'm sure you've put a lot into this.

KD: Yeah, they're all reproducible. One of the things I want to mention is, you're talking about things people use. Uh, one of the pieces of paper I sent was, we did the test on a wireless phone that people walk around their home with?

LG: Oh yeah.

KD: And this is new information for me that I didn't really know for sure – I always felt they were stronger. Uh, a wireless phone at home runs on a single frequency, whereas a cell phone has a wide range of frequencies it's run on, so your wireless phone at home has a far more focused energy field than your cell phone does. So it actually has potentially more... has... it can do more damage to your health than your cell phone. So when they did the tests, if you noticed – I don't know if you see the chart there – but the peak is much sharper and a little bit higher?

LG: Mm-hmm.

KD: And the ones on the side are stronger than the ones from the cell phone. And the neutralizer, again, cut it by 50 percent and completely eliminated the parts that do damage. Uh, this is not... they were not expecting this result, uh, directly from the walk around phone, because it's a much more focused energy. Um...

LG: Hmm.

KD: And so I really want to strongly encourage people to use it on their walk around phones.

LG: The cordless phones.

KD: It is an incredible difference.

LG: That's interesting.

KD: And that's something that everybody's kids uses, and that's what got me into this in the first place, was concern about my own children's health, and then, finally... that's what drove me to find reasons – you know – to do the research and to get where I got with this.

LG: Um, in terms of your own children's health, was there something that was challenged or compromised in one of their... in one of your child's health?

KD: Well, what had happened there was, um, I was one of those people that I... you know, the first new cell phones came out, I had to get it – you know, I like toys.

LG: Mm-hmm.

KD: Um, uh... not that I know how to use them all very well. But anyway, the... um, I noticed that my children used to get colds a lot, and we were very healthy, um... we were vegetarians for years, um... we

eat meat now, but at that point everything was very healthy and they've never been immunized, lots of different things. Uh, what happened is, I noticed them... you know, their colds were lasting longer and longer, and it just didn't feel right, so I started eliminating things out of the house. And when I took all the TVs and computers and cell phones out, within a week all of their colds, or whatever they had, were gone. And we waited about a month and then introduced them back in, and within a week they all had colds again. That's what started me on this journey, because that's when I found out – that's when I realized there was an impact there, and that's when I feel like spirit guided me to find the products we found, or the rock we found, that ultimately ended up leading to this product that we have, that works!

LG: I think that that's a good enough experiment to do if you are – if you're able to do that, if you're able to take all of the – all of the gadgets and units and stuff out of your house for a month – that's a great experiment... [laughter]

KD: But then put them back in – you're amazed at how much, uh, noise you don't hear really is there when you bring everything back.

LG: Yeah, and then I imagine you guys all slept better...

KD: Absolutely.

LG: ...and communicated more [laughter]

KD: Yep. 100 percent. There were a lot of good benefits to that little experiment. But it ended up resulting in where we are today.

LG: Well, this has definitely been a great, great service for you and for all of the people who have it, and I know that a lot of the people who have heard you on the show before have picked up these patches in the past and have, um, received a lot of benefit from it. You can go to the website, which is Aulterra, A-U-L-T-E-R-R-A, .com. If you're driving and you can't write that down right now, go to [theawareshow.com](http://theawareshow.com), and there's a link right there on [theawareshow.com](http://theawareshow.com) to the Aulterra website, and you can find out more about it from that link. And, um... So, I want to thank you very much, Kim, for joining me today, and I think that this is something that is definitely beneficial to people. Um, if you'll just hang on for one more second, I want to see if we can get five more people to give us a call; um, here's the number: 818-985-5735, that's 818-985-KPFK is the phone number to call. If you are interested in protecting your family, and yourself, from the harmful electromagnetic frequencies that come from your cell phone – then this is something that you should definitely have in your, um, on your cell phone, on your computer, on your microwave, and here's the way to get it: 818-985-5736 is the phone number to call, that's 818-985-KPFK. And, um, they will be going into the market soon, but right now they're available to you here at KPFK. And what you're doing, when you're supporting this station, is you're supporting the station that brings you the news behind the news – groundbreaking, cutting-edge, health/mind/body/spirit information. You don't find it many places, the signal here is the strongest signal west of the Mississippitti... Mississippitti! That's a new place. On the map. And, you should go there sometime. And [laughter] the benefit of having a show that talks about mind/body/spirit in such a wide range is creating such a massive healing on this planet, this type of

show, and the people like Kim that come on this type of show that have these amazing healing missions that don't get a chance to get onto CNN and MSNBC, all of a sudden... though, soon... Kim's going to be on Oprah. Um... [laughter] There's a lot that that we are doing here on this station and with The Aware Show that is planting seeds in our... in our universe that is allowing for change to happen on this planet: we're creating critical mass, we're doing what we need to be doing here on this show, on this station, to create peace, and it is happening right now. So be a part of that – support what we're doing here, support The Aware Show, support KPFK, and this is how you do it: you can support your health by calling 818-985-KPFK, and you can get a phone patch. There's three patches in one, uh, pack here, and you're supporting the station. What we're up to here is amazing, there are... everybody needs to do... be aware of the fact that by changing their thought patterns by creating that link between their mind, their body, and their spirituality, is the way to create healing and peace within their bodies, and therefore if each person does that and connects to that in themselves, that will then create peace... peace and healing on this planet. So that's what we're up to here on The Aware Show. That's what we're up to here at KPFK. So support us. Here's the way you do it: you call us here, 818-985-KPFK, and you donate to the station because we are solely listener sponsored. We do not have any commercials, as you well know, we do not have any corporate sponsors, as you well know – you are our sponsors. You put in what you get out here at KPFK. When you call and you pledge to this station you get a better sound on the airwaves, you get stronger transmitters coming from the towers up in Mount Whitney, you get board ops [???] that help... that have experience that can really make your sound sound better here on the... [laughter]... on the station, so... we really like that [laughter] Makes all of our lives much better. So, um, you really are putting in what you get out here at the station. This is one of those business models that has lasted for forty years, that is very rare. It is completely and entirely run by... well, ninety percent run by volunteers – I'm a volunteer. Ninety percent of the people that work here at KPFK volunteers... isn't that awesome? And we're supported by you, the listeners. And wouldn't that be great, if you had a business... ninety percent of the people volunteered, and the people just called and gave you money? Would that be cool? [laughter] That's what we do here at KPFK – it's an amazing business model... it's existed for 40 years this way, and it's... the reason it has existed is by people like you. Looking for passion? Looking for mission? Looking for something with meaning in your life? And KPFK pretty much gives that to you. Um... 818-985-5735 is the phone number to call. And that's how you support this particular station. Now, if you're into supporting your health, there is another way of doing that. You can pick up the cell phone patch, and it is a gift to you by your... uh, by donating to the station. Um, there was a landmark study that was conducted by Dr. Henry Lai<sup>2</sup> at the University of Washington that showed even at low levels, exposure to electromagnetic fields and radio frequencies – anything that has a microwave frequency – causes DNA damage to the brain cells of rats, resulting in loss of short-term and long-term memory, hence lower learning. I know that this is something that neither of u... I don't want to want, and that a lot of people don't want to aid in at all. Um, there's enough out there that aids in that. So, if DNA damage in the cells could have been caused by the exposure to frequencies, why wouldn't you find something that could definitely – and is scientifically proven to lessen the damage of those cells and to lessen the exposure of electromagnetic frequencies. That's how you... that what this cell phone patch is. Um, it has its own frequency developed from... it is emanated from this rock, that comes from this patch, that blocks the harmful effects of the electromagnetic frequencies. So the phone number again: 818-985-5735, 818-985-KPFK. My next

guest is coming up, we're going to talk about your health, and balancing your brain, so it's a perfect complement to the conversation that we're having right now. Um, and that is again with a homeopathic supplement, so, um, we're committed to your health on KPDK, so... what you're doing is... yeah, I know this is really cool, it's a spray that you can spray on your tongue that literally helps with the neurotransmitters in your brain. It's a homeopathic spray, and, um, it helps with all sorts of things: depression, ADD, ADHD, it's a really cool spray, so... um, and this is something that we're doing here... so we're all continuing this conversation. I want to thank you very much, Kim, for joining me today, and um, for all that you're up to with this, uh, this cell phone patch. I think it's phenomenal, so thank you very much for joining me.

KD: Lisa, I also wanted to clarify that, that we're working towards getting on the Oprah show... that we don't have a commitment there yet.

LG: I was just, uh, postulating that for you...

KD: But we're certainly on our way there.

LG: Absolutely! I know, I'm just supporting your vision.

KD: Yep. [laughter]

LG: Okay, well... no problem. Um... someday, I want that for you so that you can really have a massive exposure, because this is something that is definitely valuable to a lot of people, so thank you.

KD: Thank you very much, Lisa.

LG: Absolutely. We'll talk to you very very soon, okay?

KD: You have a great day, bye.

LG: You too, bye. Um, you can go to [theawareshow.com](http://theawareshow.com), there's a link to the Aulterra website on there. If you want to go directly to it, it's A-U-L-T-E-R-R-A .com and, um, there's a link right there that has the ability to find out about all this research, about all of the... the, uh... there's all sorts of research that's been done. There's one study done by Penn State University that concluded that EMF exposure is not as damaging for the first few minutes, and then there's a cascade of destruction that occurs, and even using an earpiece won't keep you out of danger from this EMF exposure. That same study shows that the earpieces act almost like conduits that funnel as much as three times... three times the harmful radiation to your brain. So these are all studies that you can find on the website, and, um, there's a way that you can protect yourself from these damaging effects of the electromagnetic frequencies. And that's with the neutralizer cell phone patch. So 818-985-5735 is the phone number to call. We're looking for your phone calls here 'cause we're in the middle of our fund drive... this is actually the second day of the KPDK fund drive – we're launching this here, uh, Summer fund drive. And, um, so give us a call and support the station 'cause that's what we're up to.

---

<sup>1</sup> A web search yielded a business listing for Idaho Wood Works Incorporated at 2619 Holden Ln, Boise, ID 83706-5044. Phone number (208) 344-2094.
